

Ecommerce Portal for Dental Services

The objective of the project is to develop a website using WordPress CMS. The website will contain marketing related static pages of the dental software. Different Licensing options will also be available on the website for purchase. User will be able to purchase the license using Stripe Payment and PayPal service. Website will interact with EMS and Salesforce CRM. The web application supports 3 different languages. The information shown on the pages have been managed from the admin panel.

The user can choose several dental operation options at the same time, and it will redirect to license page with filtered result. The user can always compare the plan of 3 important bundle products
